OPTIMIZED PROMPT SET FOR RESEARCH PAPER (Q1 LEVEL)

Prompt 1: INTRODUCTION

“This portion is for u to remember

You are an expert academic researcher and writer specializing in high-impact Q1 journal publications in computer science.

Typical Word Limits by Section

1. Title

10–15 words (sometimes up to 20)
Keep it concise, specific, and descriptive

2. Abstract

250 words

3. Keywords

6 keywords
Each keyword usually **1–3 words**

4. Introduction

10–15% of total paper length
Roughly **800–1500 words** (for a 6k–10k word paper)

5. Related Work / Literature Review

15–25% of total length
Typically **1000–2500 words**

6. Methodology / Materials & Methods

15–25% of total length
Around **1000–2000 words**

7. Results and Discussion

20–30% of total length
Often **1500–3000 words** (can be the largest section)

8. Conclusion

300–800 words
Usually **5–10% of total length**

9. Acknowledgement

50–150 words
Short and formal

10. References

No strict word limit
Typically **20–60 references** (depends heavily on field)

Full journal paper: 6000–10,000+ words"

Figures and tables should be clean, academic and have no AI aesthetic.

Task:

Write a formal INTRODUCTION section for a research paper.

Strict Requirements:

- Use third-person academic writing style.

- Maintain formal, objective, and technical tone suitable for Q1 journals.

- Length: approximately 2 to 2.5 pages (~900–1200 words).

- Include at least 20 in-text citations in IEEE style (e.g., [1], [2], …).

- DO NOT generate the reference list yet (only citation markers).

Structure:

1. Paragraph 1:

  - Introduce the general research domain.

  - Narrow down to the specific problem area.

2. Paragraph 2:

- Critically summarize existing work.
- Clearly highlight limitations and gaps.
- End with a precise problem statement.

3. Paragraph 3:

- Define the research question.
- Clearly explain the proposed solution.
- Emphasize novelty and contributions.

4. Paragraph 4:

- Provide paper organization.

Prompt 2: LITERATURE REVIEW

Write a comprehensive literature review with at least 15 recent papers (2020–2025).

Use IEEE citations and critically analyze each study.

Include:

- Structured analysis for each paper
- Limitations mapping to proposed work
- Comparative table with:

  Author, Method, Dataset, Results, Limitations
- Include "Proposed Work" row
- DO NOT generate the reference list yet (only citation markers).

Prompt 3: METHODOLOGY

Include:

1. Overview

2. Dataset details (with table + visualization description)

3. Data preprocessing

4. Model selection (with hyperparameters table)

5. Evaluation metrics

6. Experimental setup

- DO NOT generate the reference list yet (only citation markers).

Prompt 4: RESULTS & DISCUSSION

- Present results with tables and figures

- Critically analyze findings

- Compare with existing work

- Discuss strengths and limitations

- DO NOT generate the reference list yet (only citation markers).

Prompt 5: CONCLUSION & OTHER SECTIONS

Include:

- Conclusion + future work (max :15 lines)

- Acknowledgment

- Author contributions

- Funding

- Conflict of interest

- Data availability

- DO NOT generate the reference list yet (only citation markers).

Prompt 6: REFERENCES

Generate IEEE-style references for all citations used earlier.

Ensure correctness and consistency.

Prompt 7: ABSTRACT & KEYWORDS

Generate Abstract if max 250 words.

5 to 10 Keywords.

Prompt 8: Figures

Generative figures which are simple and academic, it should not feel like it's generated from AI.
